

Differences between off-grid and grid-connected solar energy systems

Overview

Let's break down the primary differences between these two systems: Lower Initial Cost: No need to invest in batteries (though optional). Net Metering Savings: Excess power earns credits. Unlimited Backup: You always have grid. There are three types of solar panel systems: grid-tied (on-grid), off-grid, and hybrid solar systems. Each type of system has a unique setup that affects what equipment is used, the complexity of installation, and, most crucially, your potential costs and savings. While both offer compelling benefits, they also present unique challenges. In this blog, we look at the pros and cons of each system to help you navigate the decision-making process. On-grid systems connect to the electric grid and supplement the power you receive from your utility company.
