

Electric vehicle adoption helsinki

Overview

According to the estimates done by the City of Helsinki, 30 per cent of the city's car fleet will be electric by 2030. The import of internal combustion engine cars into the EU market will be prohibited from 2035 onwards. A new study suggests that the introduction of emission-free zones in Helsinki could significantly accelerate the adoption of electric vehicles (EVs), marking a crucial step towards the city's ambitious goal of achieving carbon neutrality by 2030. It means that plug-in hybrid vehicles will be no more eligible for the benefit. Barriers to purchasing a fully electric vehicle were studied using an online survey aimed at car users located in the Helsinki region in Finland.

Electric vehicle adoption helsinki

Effect of Policies to Accelerate the Adoption of Battery Electric

Some of the transport policies with the greatest potential to mitigate climate change are related to zero-emission vehicles. This study aimed to analyse the different factors, and their ...
