

How many watts does a 24V to 220V inverter require

Overview

Total wattage needed is 2250 watts. The fridge and heater have a startup power requirement so let's allow 2x the continuous wattage for startup requirements. $2250 * 2 = 4500$ watts. Volts * Amps = watts or Watts / Volts = amps 1250-watt example: $1250 / 120 \text{ Vac} = 10.1$ amps DC (battery drain per hour) Here is an example: First, you need to determine what items you need to power during a power failure and for. We created a comprehensive inverter size chart to help you select the correct inverter to power your appliances. The need for an inverter size chart first became apparent when researching our DIY solar generator build. $120\text{V}/24\text{V} = 5$, so the step up voltage is 5.
