

How to connect the funnel to the main water tank of photovoltaic panels

Overview

The solar water pump installation involves three steps: setting up the solar array, assembling the wiring, and mounting the solar water pump. A small tank (the drain-back vessel). Imagine your photovoltaic panels as marathon runners – they perform best when kept cool and clean. Industry data shows properly cooled panels can yield 8-12%. The Solar Water Pump System can be used for residential water requirements and also for commercial uses. This system can also be used for irrigation of Agricultural Land.
