

Large inductor in solar inverter

Overview

These magnetic devices regulate current, suppress harmonics, and stabilize inverter output to protect both the inverter and the grid. From the field strings 1,500 Vdc input before the individual inverters and before the dc disconnects, there are what is called choke. A solar inverter (also called a photovoltaic or PV inverter) converts direct current (DC) into alternating current (AC) and is widely used in solar photovoltaic power generation systems. Solar inverters available today are generally divided into three types: central inverters, string inverters and. Inverter inductor is generally composed of skeleton, winding, magnetic core or iron core, shielding cover, packaging material, etc. It is a component that can convert electrical energy into magnetic energy and store it.
