

Main costs of iron flow batteries

Overview

ESS iron flow batteries typically range from \$300-\$500 per kWh for large-scale installations, with prices influenced by system capacity, duration (4-12 hours), and project complexity. For example, a 100 kWh commercial unit may cost \$40,000-\$60,000 upfront. Electrolyte Chemistry: Iron-chloride or iron-salt solutions are cheaper than vanadium alternatives, reducing material costs by 40-60%. However, iron flow batteries are regarded as nascent and provide promising opportunities due to their inexpensive and abundant availability. When it comes to renewable energy storage, flow batteries are a game-changer. They're scalable, long-lasting, and offer the potential for cheaper, more efficient energy storage.
