

New energy sodium ion energy storage principle diagram

Overview

Below picture shows a schematic diagram of a sodium-ion battery. A sodium-ion battery (NIB, SIB, or Na-ion battery) is a rechargeable battery that uses sodium ions (Na^+) as charge carriers. The performance, energy density, and cost of a sodium-ion battery are fundamentally governed by its electrode materials, with. IRENA's 1.5°C Scenario requires global battery storage capacity to increase from 17 GW in 2020 to 360 GW in 2030 and 4 100 GW in 2050 to provide the flexibility needed for a power system based on renewable electricity, as shown in Table 1.
