

Solar photovoltaic panels are a new energy source

Overview

Solar energy is the fastest growing and most affordable source of new electricity in America. On this page you'll find resources to. Solar photovoltaics (PV) is a very modular technology that can be manufactured in large plants, which creates economies of scale, but can also be deployed in very small quantities at a time. Professor of Engineering, Pennsylvania State University. It is a “carbon-free” energy source that, once built, produces none of the greenhouse gas emissions that are driving climate change. Improvements in cell performance, the use of novel materials like perovskites, and flexible, adaptable designs are fundamentally transforming how solar energy is.
