

Solar power generation in factory applications

Overview

Solar energy can be used to generate heat for a wide variety of industrial applications, including water desalination, enhanced oil recovery, food processing, chemical production, and mineral processing, among many others. This can be done either through concentrating solar-thermal power (CSP). Leverage the flat roofs of factories to generate additional power for electricity-intensive machinery or HVAC systems. The role of engineering in solar energy integration cannot be overstated. The environmental impact is profound, as it minimizes reliance on fossil fuels. Go solar—save money, stay competitive, and future-proof your factory.
