

# Tanzania load shifting

## Overview

---

Tanzania has set ambitious targets as part of its commitment to the Paris Agreement, aiming to connect 8.3 million additional households to the grid, increase electricity access from 46% to 75%, and achieve a 75% renewable energy mix by 2030. At the time of the project appraisal in 2010, load shedding and unplanned outages in Tanzania were common because of the overloaded transmission network. Our mission is to create change toward sustainable futures that protect and. And Tanzania's new Iringa-Shinyanga transmission line is proof that when energy flows, opportunities follow. Africa's power pools play a crucial role in supporting regional integration by facilitating grid interconnection between neighboring countries. These interconnected grids allow nations.

## Tanzania load shifting
