

# **Uninterrupted power supply operation and maintenance costs for communication base stations**

## Overview

---

Base stations must operate 24/7/365. Core energy consumption comes from the main equipment (RRU/BBU), air conditioning, and power supply systems (switching power supplies and batteries). Energy costs account for 40%-60% of a base station's total operating. These systems ensure a stable and uninterrupted power supply, which is critical for the operation of telecommunication networks. By defining the term in this way, operators can focus on. For example, a 5G base station with a 3 kW load requires about 30% redundancy, using 16 × 48 V 100 Ah LiFePO<sub>4</sub> modules to maintain stable 6-hour operation.
