

Uninterruptible power supply starts working conditions

Overview

In normal operating conditions the UPS pulls power from the main electrical supply and delivers it to connected equipment. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide. What is an uninterruptible power supply system (UPS) and why do I need one?

An uninterruptible power supply (UPS) is an electrical device that provides emergency power to connected equipment when the main power source (typically utility power) fails. As manufacturing lines become increasingly automated and reliant on sophisticated machinery, the need for reliable power sources has never been more.
