

What is solar molten salt power generation called

Overview

Molten Salt Solar Power Tower Technology is an advanced concentrated solar power (CSP) system that utilises molten salt as both a heat transfer and storage medium. It can reach temperatures as high as 565 degrees Celsius and is used to boil water when electricity is needed. That is why MAN Energy Solutions has developed the molten salt energy storage system, or MOSAS. Molten salt energy storage is an economical, highly flexible solution that provides long-duration storage for a wide range of power generation applications.
