The Reduced Commercial Risks with Demo of 15+ MW (RECORD15) joint industry project, which aims to install a latest generation turbine with a rated power over 15 MW on Ocergy's ...

The V236-15.0 MW was the first ever 15 MW turbine to be introduced to the market in February 2021. Since the launch of the turbine, we have secured more than 10 GW of Firm Orders & Preferred ...

The IEA Wind 15-MW reference wind turbine uses a direct-drive layout with a permanent-magnet, synchronous, radial flux generator in a simple and compact nacelle layout.

June 23rd, 2025 - Ocergy, Inc. is pleased to announce the official start of the Reduced Commercial Risks with Demo of 15+ MW (RECORD15) Joint Industry project, which aims to install a latest ...

He Dreht - which means "it spins" in Low German - is using Vestas's massive 15 megawatt (MW) turbines, the first project in the world to install them. Just one spin of one of the ...

The present work analyzes the energy production and structural performance of an NREL-IEA 15 MW wind turbine using measured wind and hydro data. First of all, an optimum ...

Siemens Gamesa's latest generation of offshore wind solutions includes fewer moving parts as the company transitions away from geared turbines. Its direct drive design uses a ...

Germany's largest offshore wind farm to date, EnBW's He Dreith project, achieved key milestones as it proceeds with construction and provides encouragement for a somewhat ...

A combined wind-wave energy generation concept based on a 15 MW class wind turbine is presented.

The SG 15-236 offshore wind turbine from Siemens Gamesa delivers 15 MW of nominal power, combining high efficiency and reliability to harness powerful winds.

15MW wind power generation
