-----

Massive number crunching requires high-performance computing and drives increasing data center power densities. In fact, average rack density has almost doubled in the past five years. Find out ...

The facility is engineered to deliver up to 200kW per rack, far more than the average 15-20kW per rack. With a total power capacity of 20MW, the facility integrates advanced liquid cooling ...

Leveraging row-level CDUs, along with passive CDUs with a two-phase system, the architecture provides a flexible solution for data centers to support next-generation IT equipment.

Traditional air only cooling supports only 20-40 kW per rack, while modern state-of-the-art RDHx technology (rear-door heat exchangers using chilled water) extend this to 50-80 kW. Beyond that, ...

The CHx200 rack CDU delivers 200kW cooling in 4U space with warm water compatibility, redundancy, and efficient performance for HPC and enterprise.

We specialize in custom-tailored CDUs, providing bespoke solutions for data centers ranging from 1 megawatt to 6 megawatts. Our plug-and-play Load Banks are designed to streamline ...

ACT's 200kW Coolant Distribution Unit (CDU) delivers advanced two-phase liquid cooling for direct-to-chip applications in high-density environments.

RackChiller CHx - Cooling Distribution Unit (CDU) can manage 200kW+ of heat load in a remarkably compact 4U form factor. CHx was designed to be installed and operate in demanding data center ...

Explore high-performance server racks, data center cabinets, and power distribution solutions from CPI. Optimize space, cooling and uptime today.
