-----

Not only has the project killed thousands of birds and turtles, it has cleared untouched desert and destroyed many rare plant species.

Investigators visiting one of the world's largest solar facilities observed one bird being cooked every two minutes as they flew over the plant's phalanx of solar mirrors.

The Ivanpah Solar Plant in San Bernardino county is killing thousands of birds, blasting them into wisps of smoke against the sky that plant workers call

Much of the alarm about bird deaths at solar sites originates from concentrated solar power (CSP) plants. These facilities use mirrors called heliostats to focus sunlight onto a central ...

After splashing \$2.2 billion on the Ivanpah Solar Power Facility, which is located in California's Mojave Desert, it was hoped that the state would be able to cash in on the money it ...

A rare and unusual type of solar power plant that concentrates sunlight in California is accidentally killing up to 6,000 birds every year, with staff reporting that the birds keep flying into its ...

One of the most expensive green energy projects ever undertaken in American history looks like it is now on borrowed time after eating up massive amounts of taxpayer dollars and killing thousands...

Solar farms can impact bird populations through several mechanisms, leading to fatalities or displacement. The "lake effect" occurs when reflective photovoltaic (PV) panels are mistaken for ...

Between September 3 and 19, we reported, 20 birds had been found dead at the plant, 13 of them showing signs of burn injuries possibly related to the plant's concentrated solar &quot;flux.&quot;

The impact of a solar facility on birds hinges entirely on whether it uses photovoltaic panels or concentrated
