From California to New England, construction of solar energy is picking up speed, showing promise for hitting sustainability goals. In this article, we cover the largest solar energy ...

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW in the ...

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 ...

As the United States works toward decarbonizing the electricity system by 2035, solar capacity will need to reach one terawatt (TW), which will require more diversity of siting configurations.

The U.S. Large-Scale Solar Photovoltaic Database provides the locations and array boundaries of U.S. photovoltaic facilities, with capacity of 1 megawatt or more.

Discover the world's biggest operational solar farms and the mega projects set to reshape tomorrow's renewable energy landscape.

Welcome to the Global Solar Atlas. Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for ...

Countries worldwide, including Germany, Spain, China, the United States, and others, are rapidly expanding their solar power infrastructure. China has been a particularly prominent ...

Explore 2025 solar siting trends across the U.S., including site availability, parcel size, and hosting capacity shifts. Insights to guide your next project.

Are there many new energy photovoltaic sites

As of February 2026, there are 4,155 planned solar projects in development in the US, according to Cleanview's project tracker. Their total planned capacity is 693,408 MW. Of these, 859 planned solar ...
