New system uses a flexible organic photovoltaic panel to power bidirectional electrocaloric devices that keep the wearer warm or cool.

Our fabric is designed to reflect sunlight and prevent solar heating. These fabrics passively keep you cool throughout the day, even in the hottest climates. But that's not all - these ...

What the present invention relates to is clothes, especially a kind of air conditioner clothing with solar energy.

Consequently, the flexible OPV-EC thermoregulatory clothing (OETC) system can function around the clock, utilizing stored energy from the ESS to maintain body temperature in a comfortable ...

According to a team of scientists, they have made solar-powered smart clothing using flexible solar cells and an electronic device. Together, they create clothing that allows the body to ...

The researchers are full of optimism and hope that the technology will find wide application in clothing, building materials, and street furniture. However, the main obstacle still ...

The team developed a thermoregulatory clothing system that combines an organic photovoltaic module with bidirectional electrocaloric devices that are capable of heating or cooling.

Chinese researchers have presented a novel idea for solar-powered apparel that can control the body temperature of the wearer. The idea, which was developed by Ziyuan Wang and ...

Because the unit is powered by solar energy, it can maintain skin temperature without a battery pack. The patch can also rapidly adjust to ambient temperature swings by automatically ...

In the new work, scientists say that the system could be integrated into conventional clothing. Once it is added

Athens solar air conditioning clothing protection

in, the device can provide 10.1 degrees Celsius of cooling, but also keep it ...
