How many wind farms are there in Australia?

This energy type is one of Australia's main sources of renewable energy, generating enough electricity to meet 7.1 per cent of the nation's total electricity demand. At the end of 2018, there were 94 wind farms in Australia, delivering nearly 16 GW of wind generation capacity.

How much does wind energy cost in Australia?

This energy type is one of the lowest-cost sources of new electricity supply in Australia, along with utility-scale solar PV. The cost of utility-scale wind energy in Australia is expected to continue falling, with new wind farms expected to deliver electricity at around \$50-65/MWh in 2020 and below \$50/MWh in 2030.

How can wind energy be used to maintain a reliable supply of electricity?

As the wind does not continuously blow, researchers have developed ways to use energy from wind that also help to maintain a reliable supply of electricity, such as pairing wind farms with solar farms and/or energy storage such as batteries (see ARENA Action below).

Who is Genpower Australia?

Genpower Australia - Designing & manufacturing power generating solutions, enclosures and switchboards for Australian Industries. Welcome to Genpower Australia. We are South Australian based, South Australian owned company with many years of experience within the generator, switchboard and metal fabrication business.
