Rapid workforce growth is needed to achieve Australia's clean energy targets, according to a new report from the Institute for Sustainable Futures, University of Technology Sydney (ISF), in ...

Of the awarded 20 projects, 12 are hybrid schemes that combine battery storage with wind or solar generation. The selected renewable energy projects are spread across various states. ...

Battery storage is now key to Australia's clean energy transition. It stabilizes supply by storing extra renewable energy and delivering it on demand, even when solar or wind output drops.

Australia's solar and energy storage sectors delivered strong performance during the third quarter of 2025, with grid-scale solar generation reaching 1,699MW average output while battery...

Australia's latest CIS Tender 4 has delivered a landmark set of 20 clean energy projects, totaling to a massive 6.6 GW of renewable capacity and 11.4 GWh of battery storage. These are ...

Australia's energy market hit a turning point in 2025. As rooftop solar growth slowed, battery installations surged to record levels, reshaping how homes and the grid use electricity. This blog ...

Solar and battery storage will do the heavy lifting on the path of decarbonising Australia's electricity system, AEMO predicts.

Australia is already transforming its energy systems to achieve the Australian Government's target of 82% renewable energy in the Australian grid by 2030. Australia is home to: some of the world's ...

In its latest monthly column for pv magazine, the International Solar Energy Society (ISES) explains how Australia's rapid expansion of solar and wind energy has not increased ...

For the first time, renewables and storage supplied more than half of the system's energy needs for a full

Australian wind solar and storage

quarter. More wind, solar and battery capacity in the system reduces reliance on ...
