China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive government report ...

The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity--an increase of more than 130% year-on-year. This figure accounts ...

Recently, multiple new energy storage projects across China have reached important milestones. In Shandong, Xinjiang, Hebei, Qinghai, and Inner Mongolia, several 100-MW-level projects have either started ...

During the 14th Five-Year Plan period, China's energy storage technology mix witnessed noticeable changes where pumped hydro storage accounted for less than 40% for the first time while the new-type energy ...

1 China has a goal to install 180 gigawatts of battery energy storage systems by the end of 2027, with a direct project investment of \$35.2 billion.

China's cumulative power-sector energy storage capacity reached 213.3 GW by the end of 2025, up 54% year on year, according to data from the China Energy Storage Alliance (CNESA)...

Of this total, 101.3 GW stems from so-called "new energy storage" technologies--largely lithium-ion battery systems--representing a 110% year-on ...

As China's new energy storage industry moves from initial commercialization to large-scale development, what opportunities and challenges lie ahead? And how will the acceleration of the "China ...

2024Q3 market data of energy storage in China, USA, UK and Germany, from CNESA Datalink Global Energy Storage Database

The project not only sets a new record for the installed capacity of grid-connected semi-solid-state lithium

China energy storage

battery energy storage in China, but also marks a crucial step for China's semi-solid-state energy ...

The China Energy Storage Alliance is a non-profit industry association dedicated to promoting energy storage technology in China.

Since its establishment in 2012, the Energy Storage International Conference and Expo (ESIE) has successfully held 13 editions. It is the world's leading energy storage event and professional exhibition ...

By the end of 2023, China had completed and put into operation a cumulative installed capacity of new type energy storage projects reaching 31.4GW / 66.9GWh, with an average storage duration of 2.1 ...

China's new energy storage capacity has exceeded 100 million kilowatts, marking a major milestone in the nation's transition toward a new-type energy system and consolidating its ...

China is accelerating the development of energy storage technologies as a key measure in unlocking the full potential of renewable energy. Energy storage systems can help stabilize the ...
