This paper provides some reference ideas for solving the problem of selecting and planning the base station site in the communication network.

It is increasingly important to optimally select base stations in the design of cellular networks, as customers demand cheaper and better wireless services. From a set of potential ...

Abstract Increasing number of base station sites with continuously growing customers not only lifted up the total cost of the cellular network but it also has radiation hazard issues affecting health. So, it is ...

presents a following method: location selection and network optimization for the wireless communication network. First, it collects the experimental data set of base station locati.

In order to minimize the cost of establishing base stations while covering a large amount of services, this paper uses objective planning and establishes a mathematical model to solve the optimal establishment method of ...

We employ a simulated annealing algorithm to determine the number of new base stations needed. After rigorous analysis, our optimal solution suggests deploying 131 micro and 19 macro base stations, with a ...

In this paper, a base station siting planning method based on an improved K means algorithm is proposed in a hilly environment.

Aiming at the problem of site planning and spatial clustering under the communication network, this paper uses the multi-objective programming model to design a feasible scheme for the site planning ...

Based on the principle of priority business volume and the cost performance of base station, this paper establishes a set of models to solve the site selection planning problem of urban...

# Communication system base station site selection

Firstly, this paper outlines the site selection issues for communication base stations, considering the varying communication needs of users and constructs a site selection model for communication base ...
