How much power does a data center rack have?

While power density per rack averaged 6 kW in 2006, it climbed to about 8 kW by 2012, and is expected to approach 12 kW per rack by 2014, according to data collected by the Data Center Users Group, sponsored by Vertiv™. The need now exists for taller, wider and deeper racks to accommodate the changes in IT equipment and densities.

What is kilowatt per rack?

Kilowatt per rack (kW/rack) is the power assigned to a server rack in a data center. It is measured in kilowatts (kW) and represents the total power needed for all IT equipment in that rack. Colocation providers offer different power levels: Power density depends on server type, workload, and cooling efficiency.
