How much does electricity cost per kWh?

If we averaged out the electricity prices in every country in the world, we would arrive at 14.2 U.S. cents per kWh for household users and 12.7 U.S. cents per kWh for business users - the global average electricity price.

How do electricity prices vary across the world?

Electricity prices vary widely across the world and sometimes even within a country itself, depending on factors like infrastructure, geography, and politically determined taxes and levies. For example, in Denmark, Belgium, and Sweden, taxes constitute a significant portion of residential end-user electricity prices.

What is the distribution of electricity prices?

The chart shows the global average residential electricity prices at several levels of electricity consumption: at 25 percent of the average annual consumption, 50 percent, and so forth. The distribution is U-shaped: prices are higher at low and high levels of electricity consumption.
