Our SIGRACELL expanded graphite products and felts are used as permeable electrodes or current collectors in various types of batteries, including redox flow, sodium-sulfur, and ZEBRA batteries.

In this paper, we adopt a new idea of three-dimensional graphene self-assembly, using graphite felt as the base frame; and a hydrothermal reduction method to grow rGO on the surface of carbon fibers.

Among these factors, the intrinsic structures of graphite felt (GF) and carbon cloth (CC) play a pivotal role in determining the overall working conditions of ICRFBs.

Learn how porous graphite felt acts as the critical interface for energy conversion and fluid dynamics in iron-chromium flow battery electrodes.

Soft graphite battery felt, as a premium electrode material for most energy storage systems, like vanadium redox flow batteries, utilizes special fibers and weaving techniques, aiming to achieving ...

This product is a kind of graphite felt electrode material for all ...

Polyacrylonitrile-based graphite felt has the properties of high temperature resistance, corrosion resistance, low thermal conductivity, large surface area and excellent electrical ...

GraphiMaterials supplies batter felt called GFE-1 which is a high liquid adsorption PAN Graphite felt used in energy storage battery technology such as Vanadium Redox, Iron & Zinc Salt Hybrid flow ...

To improve the electrochemical activity of graphite felt, the PAN-based graphite felt was activated by boric acid thermal etching, and tested with SEM analysis, electrochemical analysis, and ...

Charge-discharge test was conducted using a single home-made flow cell on a battery test system (CT2001A) with a voltage range of 0.7-1.7 V. Modified graphite felt (5 × 5 cm 2) was ...

Graphite cloth for flow battery electrodes

This product is a kind of graphite felt electrode material for all vanadium flow battery, which is produced by needling, carbonization, graphitization and other processes with specially treated carbonizable fiber.
