In 2023, the share of renewables in Japan's total electricity generation (including on-site consumption) was estimated to be 25.7% (preliminary figures), a significant increase (3 percentage ...

This article covers considerations on Tokyo's new solar panel installation mandate, current energy generation challenges and examples from Germany's initiatives.

The government enacted a feed-in tariff in November 2009 that requires utilities to purchase excess solar power sent to the grid by homes and businesses and pay twice the standard electricity rate for ...

The government intends to promote business consolidation by giving preferential treatment to "certified operator" with an aim to expanding solar power generation, named as a pillar of...

Policies target an increase in the share of renewable generation sources including solar, wind, hydropower, geothermal, and biomass from 26% in 2022 to 36%-38% by 2030 and an ...

Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality ...

Japan's commitment to achieving net-zero emissions by 2050 includes a target for solar photovoltaic (PV) to generate 14%-16% of the nation's electricity by 2030, as outlined in the Sixth ...

For each of the two scenarios, we made a forecast on the PV installed capacity toward 2030 by application, capacity range and area, with the assumptions of price forecasts, changes in the ...

TOKYO, Dec 24 (Reuters) - The Japanese government will tighten regulations and end financial support for large-scale solar power projects to protect the natural environment, ensure safety and...

Japan's solar photovoltaic power generation policy

Japan's Sixth Strategic Energy Plan was agreed in 2021, and formed a plan for 2030. It includes a large planned scale-up of solar, an increase in onshore wind, and a new offshore wind industry.
