China's solar power additions are set to decline in 2026 for the first time in seven years, as the industry ...

China's 2025 renewable energy policy shift marks a move from fixed feed-in tariffs (FITs) to a market-driven pricing model for solar PV. Effective June 1, 2025, this change aims to...

China's PV industry has established a preliminary policy system. Industrial policy is lagged compared with the market development. Reducing carbon footprint of PV products is critical for policy design.

One rule change that went into effect May 1 made it more difficult to connect rooftop panels to the grid, while another that started June 1 removed pricing protections that had all but guaranteed profit for wind ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the first time.

China's solar power installations jumped by 30% in October from September, as capacity additions rebounded from the summer months, which had seen a new renewables pricing mechanism ...

- China's solar market hit a 2025 peak with 315.07 GW AC added, but new market-based pricing policies triggered a sharp post-June 2025 decline in installations. - Grid capacity struggles to absorb rapid ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

China is set to have more solar power capacity than coal for the first time this year, marking a "historic" milestone in the country's energy transition. Data released on Monday by a ...

In Article Audio Player China's solar power sector is bracing for a sharp slowdown in new installations in

Latest China Solar Power Policy

2026 after a major policy overhaul last year altered how renewable energy projects are paid, ...
