The Storage Regulations contain rules on the applicability of interconnection and connection studies; the possible offers for the purchase and sale of electricity, capacity, and ...

The Mexican government announced in March 2025 a first-of-its-kind measure in the region: all solar and wind power plants must integrate battery systems equivalent to 30% of their installed capacity, ...

The report explains that Mexican regulations define five storage modalities -linked to renewable energy plants, load centers, and independent solutions - and formally recognize these ...

As there are no particular regulations under Mexican law, we anticipate that energy storage technology will be commercialized as an ancillary service under the Wholesale Electricity Market and frequency ...

Thanks to the country's geographical conditions, Mexico has great potential for solar and wind energy, which makes it an ideal candidate for the implementation of energy storage systems to ...

The DACG aim to establish the modalities and general conditions under which the integration of Electric Energy Storage Systems (SAE) into the National Electric System (SEN) will be ...

This transformation involves balancing state oversight with private investment to modernize the grid, integrate Battery Energy Storage Systems (BESS), also known as Sistemas de ...

The regulations specify five energy storage models: integrated with renewable energy power plants, load centers, stand-alone systems, distribution networks, and microgrid off-grid systems.

As the regulatory framework evolves, further innovations in energy storage are anticipated, paving the way for a more efficient and resilient power system in Mexico.

Number of peak load regulation times of energy storage in Mexico power grid

Among other things, it establishes that electric energy storage equipment must be registered as a power plant and must be represented by a generator.
