-----

Trelleborg has been supplying parts for wind turbines since the technology began. Numerous advanced seals from Trelleborg Sealing Solutions contribute to effective operation of hydraulics, withstanding ...

High quality, robustness and long lifetime of the Rotary Joint used are essential if turbines are expected to run year after year with high availability, low maintenance and to eliminate loss of hydraulic oil ...

A detachable tubular structure for a wind turbine tower offers several advantages in a support structure system. These benefits include faster and easier installation, reduced construction ...

Manufactured according to ASME B16.20 standards. Energy sustainability and environmental impacts of natural gas, fossil fuels, gas turbines, and other green technologies are in the news every day in ...

2 passage rotary union / joint designed for a wind turbine hydraulic blade pitch control application. Features a direct OEM replacement design, integrated seals and electrical slip ring mounting features.

Floating offshore wind foundations are designed to support wind turbine generators in deep water. In these locations, the seabed is too deep for traditional fixed-bottom wind turbines.

One question that frequently comes up is whether a rotating pipe joint can be used in a wind power generation system. In this blog post, I'll explore this topic in detail, discussing the ...

The foundations of the offshore wind turbine must be durable against environmental loads over a lifetime. The grouted connection (GC) is a core part that transfers load from the turbine ...

During installation and operation, the drainage hole L must be connected by an oil pipe to the oil collection tank. And the oil pipe must not be blocked to avoid back pressure.
