Over 5,000 Oslo households now participate in a blockchain-based energy sharing network. Their home batteries automatically trade electricity during peak hours, creating what locals ...

Electricity grid performance and energy management is key for Oslo to achieve its net zero transition by 2030. This pilot will focus on supporting emissions-free energy supply to construction machinery and ...

Distributed Resources (DR), including both Distributed Generation (DG) and Battery Energy Storage Systems (BESS), are integral components in the ongoing evolution of modern power systems.

Our primary research focus to support the transition to sustainable future energy systems that meet the Paris Agreement Goal. We therefore develop and use energy system models with a focus on ...

It adopts high-safety lithium iron phosphate batteries and is equipped with the province's first integrated system of "new energy + energy storage + digital management and control", with a charge-discharge ...

Against a backdrop of geopolitical tensions and fragile energy markets, this year's report explores how structural shifts in economies and in energy use are shifting the way that the world meets rising ...

The goal is to quantify the effects of various measures on energy and power balances and on the achievement of Oslo's climate goals, as well as to understand the trade-offs between ...

The Voldsløkka school in Oslo provides a valuable reference model for integrating decentralized onsite renewable energy sources, flexible storage, and energy-efficient design in public ...

At UiO, we look at how ICT can increase the integration of renewable and distributed energy sources by making energy systems smarter, and to increase energy efficiency.

Oslo distributed energy systems

When you land on a webpage about Oslo distributed energy storage companies, you're probably either: But here's the kicker - Norway's energy storage market grew 48% last year alone (Statista 2023). ...
