---

The suspension of DESPV systems threatens Pakistan's target of achieving 60% renewable energy by 2030. Solar projects, which contributed 4% of total energy in 2023, now face delays.

Rather than discouraging distributed solar adoption through aggressive regulatory measures, Pakistan needs to develop a policy playbook to manage distributed resources in a way ...

By creating new access opportunities in marginalized communities, solar challenges the entrenched inequities of Pakistan's energy regime. However, this democratizing potential is still ...

The surge in solar and batteries is not only driving down energy costs for Pakistani users but also enhancing reliability and contributing to the country's energy sovereignty by reducing ...

Today, Pakistan has a surplus generation capacity of nearly 20,000 MW, yet almost 10% of households remain without electricity access at all. Many urban and rural communities still face ...

The bulk of solar equipment in Pakistan is imported from China, where prices have declined due to overproduction and technological advancements, making rooftop solar more ...

Sheikh remarked that the introduction of batteries and solar panels has significantly disrupted the system, highlighting that technological advancements are inevitable and cannot be ...

This surge in solar and batteries is driving down energy costs and improving reliability for individual users in Pakistan. By reducing dependence on imported fuels like LNG, it is easing ...

Booming solar capacity additions in Pakistan have been making global headlines, but industry leaders are now calling for quick deployment of energy storage to complement PV growth.
