Effective September 2, 2025, only solar projects with a nameplate capacity of 1.5 MW (AC) or less may use the five percent safe harbor. Large wind and solar projects must instead satisfy ...

In contrast to the repeal of the Five-Percent Safe Harbor for solar and wind facilities qualifying for Sections 45Y or 48E, the Notice largely adopts the existing rules applicable to the ...

If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit.

If you invest in renewable energy for your home (solar, wind, geothermal, fuel cells or battery storage technology), you may qualify for an annual residential clean energy tax credit of 30% of the costs for ...

When the amount spent on the solar PV system is mostly used for residential rather than business purposes, the residential credit may be claimed in full without added complications.

This post will provide a brief overview of the ITC and describe how solar, storage, and wind projects can still access the ITC, including Direct Pay and bonus credits.

Unlike solar and wind, which had their construction cutoff dates moved up, BESS projects will remain eligible for the investment tax credit (ITC) and production tax credit (PTC) under sections ...

Commercial entities installing a solar system with a capacity of less than 1 MW of AC power are eligible for a base tax credit of 30%. This credit can increase to as much as 70% if the ...

The longstanding "beginning of construction" rules allow solar and wind projects to "safe harbor" qualifying

Payment for wind-resistant photovoltaic energy storage containers used on islands

for the ITC or PTC based on when construction began and assuming some level of ...

In clean energy development, "Safe Harbor" refers to IRS rules that allow a project to lock in eligibility for tax credits by showing that construction has "begun" before a certain deadline. ...
