NLR develops data and tools for modeling and analyzing photovoltaic (PV) technologies. View all of NLR's solar-related data and tools, including more PV-related resources, or a selected list ...

The energy output range is based on analysis of 30 years of historical weather data, and is intended to provide an indication of the possible interannual variability in generation for a Fixed (open rack) PV ...

Here we present real-world data from 21 privately operated lithium-ion systems in Germany, based on up to 8 years of high-resolution field measurements. We develop a scalable ...

This project collects data from a utility-scale direct current (DC)-coupled photovoltaic (PV)-plus-storage plant, and will prepare and share data publicly, and provide example solar resource, plant ...

The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this ...

RE+ Northeast is the largest forum for professionals dedicated to the integration of solar, energy storage, and additional renewable energy assets like wind energy and electric vehicle infrastru...

Although developers have added natural gas-fired capacity each year since then, other technologies such as wind, solar, and battery storage have become more prevalent options for new ...

We focus here on national trends, with an emphasis on PV systems installed from 2010-2024; additional data, including state-level trends and data for earlier years, are available through Berkeley Lab's ...

Each quarter, NREL conducts a presentation of technical trends within the solar industry.

Furthermore, access to data on battery charge and discharge profiles in real applications is essential to develop effective energy storage and management solutions. Thus, this dataset ...
