Therefore, this paper aims to investigate the application of bionics principles to propose a novel type of photovoltaic bracket pile foundation designed to meet diverse bearing capacity ...

This study has comprehensively investigated the bearing characteristics of three types of photovoltaic support piles, serpentine piles, square piles, and circular piles, in desert gravel areas.

Obviously, the photovoltaic support brackets are the main load-bearing components in the photovoltaic structure of power station. Selecting an economic and reasonable photovoltaic support ...

The load bearing capacity of the PV system is discussed under self-weight, static wind load, snow load, and their combination. The influences of row spacing, tilt angle, initial cable force, ...

Utilizing experimental data, numerical simulation technology was employed to comprehensively investigate the pullout resistance, compressive resistance, and horizontal bearing ...

This study aims to examine the factors influencing the bearing characteristics of the serpentine piles.

The simulation model of fixed photovoltaic bracket is established by ABAQUS, and the numerical simulation results are compared with the test results. Through parameter analysis, the ...

The support configuration at both ends is one of the key factors affecting the load-bearing capacity of photovoltaic support structures. A brace that is too weak can exacerbate the deformation ...

The present application relates to the technical field of a floating power station, more specifically to a floating photovoltaic power station and a load-bearing system thereof.

Load-bearing capacity: An engineer or professional should assess the roof's load-bearing capacity to ensure it can support the additional weight of the solar panels, ...
