Thereby the project aims to reap economic benefits, reduce greenhouse gas emissions, increase resource preservation, and identify replication potential across Vanuatu and neighboring Pacific Islands.

Part IV focuses on the carbon emissions in the port region, including the port-related emission sources and port abatement measures, and provides a comprehensive literature review.

Mitigation-related indicators assessing the city's capacity to monitor and reduce emissions, including resource efficiency, combined with the effectiveness of urban systems in delivering positive ...

Port Vila, Vanuatu [29 August 2023]- Two important policies were launched today in Vanuatu to support the reduction of greenhouse gas emissions (GHG) in the country. Vanuatu's ...

This significant reduction will cut carbon emissions by 2,500 tons annually and improve electricity affordability for local consumers, who can anticipate an approximately 2% reduction in the ...

Pacific nations have identified in the Port Vila Call to Action, real, effective and tangible solutions towards a fossil fuel free Pacific and the just and equitable transition we required to take us there.

By eliminating the need for over 1 million litres of imported fossil fuel each year, the project will have a dual impact: reducing carbon emissions by 2,500 tons annually and enhancing electricity ...

I appreciate the workshops that are being run in Port Vila today and this week by the GGGI team that are focused on developing those next steps towards Vanuatu's low emissions, ...

Developed under the Pacific Adaptation to Climate Change (PACC) Programme, the plan provides a long-term vision to improve Port Vila's environmental quality, resilience to climate change, and ...
