-----

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

The CO Bar Complex in Arizona has reached final development status, with Enlight confirming 1.211 GW of solar capacity alongside 4.0 GWh of storage across the site.

During the day, storage can absorb excess solar and/or wind production, preventing it from being curtailed. Then, as solar production falls off in the evening the battery units can discharge ...

Construction crews are building this technology combination across America at record levels - solar-plus-storage composed 84% of new U.S. grid capacity installed in 2024, adding 37 ...

For instance, in the United States, converting coal-fired power plants into energy storage systems provides economic benefits, including reduced decommissioning costs, job preservation, enhanced ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

This fact sheet summarizes key considerations and approaches to support communities and developers in repurposing coal power plants to solar and storage facilities.

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

Solar panels and batteries will account for more than 80 percent of new power capacity installed in the U.S. this year, officials say. Both technologies are set for record growth, helping to ...

Hundreds of sheep graze among the panels at the Sherco Solar power plant in Minnesota, which is slated for a
