This report is Ember's first comprehensive review of China's clean energy progress and its implications for the rest of the world, undertaken because of China's centrality to the global transition.

Today, we are thrilled to share that Global Renewables Watch, a first-of-its-kind living atlas mapping and measuring utility-scale solar and wind installations across the Earth, is now live to ...

China is changing the world's power game. In May 2025 its solar farms made over 100 terawatt-hours (TWh) in one month. That is about one-third of all the power the United States made ...

China is leading the world in new solar and wind installations and doing so at a record-shattering pace. In May 2025 alone, the country added 93 gigawatts of solar capacity, or nearly 100 ...

Integrating renewable energy at such speed and scale, however, poses formidable challenges. China's experience offers valuable insights into how countries can manage the technical, ...

China's swift and unprecedented expansion in renewable energy, marked by record-breaking solar and wind installations, positions the nation as a formidable leader in the global shift ...

Critics of China's climate policy argue that China is not trying to replace fossil fuels with renewable sources of energy, but instead trying to increase the energy capacity of both forms of energy.

A report by the International Energy Agency, or IEA, on the future of renewable energy production has pinpointed China, and in particular its solar power capabilities, as leading the way for ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

Solar energy live energy lifetime china watch

China has become the first country to cross 1,000 gigawatts of installed solar power, marking a historic milestone in 2025. As renewable energy additions surge worldwide, this year redefined...
