How to install a solar inverter?

Step 1: Plan the Installation Site Choose a Location Choose Cable Entry Location for the AC and DC Wires Plan Amount and Size of Conduit Plan Distance Between Components Step 2: Mount the Solar Inverter Step 3: Make Electrical Connections Install Mid-Circuit Interrupters in PV Array Test PV Strings with MCIs Make DC Power Connections

Where should a PV inverter be installed?

The shelters can be directly behind the PV panel or under the eaves. The inverter should be installed in a well-ventilated place to prevent its performance from being affected by poor heat dissipation. When the inverter is running, the surface (especially the radiator part) has a high temperature.

Can non-professional personnel open the front panel of the inverter?

Non-professional personnel are prohibited to open the front panel of the inverter, as there is a high voltage risk! When the inverter is running normally, there is dangerous voltage inside the equipment! Please operate the inverter in strict accordance with the instructions in this manual!

How to connect a PV inverter to a ground?

5.3 Grounding Connection (PE) Connect the inverter to the ground. The positive pole and negative pole of the PV array are NOT grounded. Otherwise it will cause inverter box enclosure, etc. (see M8 OT Terminal) Procedure: Step 1: Remove the insulation layer with an appropriate length using a winding connection instruction (1) Note: the length of

SOFAR 100~125KTLX-G4 is a transformerless on grid PV inverter, that converts the direct current of the PV array to the grid-compliant, three-phase current and feeds into the utility grid.
