Is your fan not running? Please go through the troubleshooting steps outlined on this page to isolate the problem. Contact us today for more help.

The issue: What happens is the fan doesn't fully "spin up," it surges once a second then stops completely. It's as if the controller puts a little power to the load and shuts down the load. This ...

If it's faulty, the fan won't run. Solution: Test the thermostat using a multimeter or by bypassing it temporarily (if you're comfortable and know what you are doing) to see if the fan starts.

Troubleshooting a solar roof fan that isn't spinning requires a systematic approach and a basic understanding of how these devices work. By following the steps outlined in this blog post, you ...

We'll dive deep into the top 10 solar inverter failure codes and issues, providing clear DIY troubleshooting steps and critical advice on when to contact a certified technician.

On a cloudy or hazy day, the solar panel is generating less power, causing the fan to run at a slower speed. This is normal behavior. Quick Fix: There's no fix needed. The fan will increase its ...

Inverter cooling fans run when the inverter is charging a battery or loading appliances, and if there is insufficient power the fan will stop working. Cleaning the fan, increasing battery power or tightening ...

More than likely, your fan is not running due to a simple loose wire (from shipping or installation) or a faulty thermostat, motor, or 110V adapter.

Locate the relevant troubleshooting section below if you have received an alert from us, or if your system is experiencing a problem. Click the "Troubleshoot" button in that section to start the process. You will ...
