Secondly, based on the known spectral signature of the PV module, stain detection methods are proposed, including CEM-based stain detection and OSP-based stain detection for PV ...

In this work, we propose a simple and inexpensive sparking process to produce an AR film. This method uses simple equipment that can be operated in ambient conditions without a high-vacuum system. ...

Anti-reflective and Self-cleaning coatings are applied for less reflection and more light transmittance. The most common methods are solgel + spin coating and solgel + dip coating ...

When sunlight shines on the photovoltaic panel, it needs to pass through the photovoltaic glass and encapsulant before reaching the photovoltaic cell. Therefore, for photovoltaic systems, self ...

To resolve this issue, various commercial grade solar panel coatings have been developed which possess high-quality hydrophobic, self-cleaning, long-lasting, high-performance nanocoatings for all ...

Soiling is the process whereby dirt, dust and organic/inorganic contaminants deposit on the surface of a photovoltaic (PV) module. It causes significant economic losses and can have a...

A coating material for photovoltaic solar panels that combines anti-reflective and self-cleaning properties through a novel nanocomposite system. The coating comprises a matrix of ...

There are two types of self-cleaning coating: hydrophobic and hydrophilic. Self-cleaning hydrophobic coating repels the dust and dirt contaminants by sliding away or rolling off the particles ...

The present invention relates to protective coatings for solar photovoltaic panels, specifically a transparent stain containing metal oxides that provide antimicrobial and antifungal ...

Stain composition on photovoltaic panel surface

In this work, commercial solar panels were coated with sparked titanium films, and the antireflective, super-hydrophilic, and photocatalytic properties of the films were investigated.
