For this reason, we develop projects and actions based on the circular economy, to reuse the stored energy of sugarcane in biomass, burning it in high-efficiency boilers to produce electricity.

In this study, the performance of an operating traditional sugar factory is analyzed for electricity generation and export potential. The study presents characteristics and energy potential of modern ...

LNBR led SUCRE (Sugarcane Renewable Electricity), a five-year project funded by the Global Environment Facility through the United Nations Development Programme to increase the ...

The specific production of electricity by Brazilian mills has increased over time as a result of improvements in power generation and more efficient use of steam in the sugar and ethanol ...

Solar: 7,661.30 MW, 183 Projects; Offshore Wind: 5,035.00 MW with 11 Projects; Onshore Wind: 2,614.60 MW, 15 Projects; Small Hydroelectric Power Plants (PCHs) 3,367.76 MW, 37 Projects and ...

To meet the objectives of the Sugarcane Renewable Electricity (SUCRE) Project, twelve mills were selected to identify the best technological processes for collection, transport, processing ...

LNBR led SUCRE (Sugarcane Renewable Electricity), a five-year project funded by the Global Environment Facility through the United Nations Development Programme to increase the supply of ...

In summary, we expect for the next decade that SUCRE will be perceived as a major contributor to sustainable biomass-based electricity generation in Brazil and that it will have positively impacted ...

The objective of the project is to create the conditions for sugar mills to increase the export of electricity generated by sugar cane trash and bagasse to the grid.
