Switzerland's path to energy independence and security. How we secure Switzerland's freedom, independence, prosperity and energy supply through local, decently arranged renewable energy ...

Switzerland's plan includes gradually eliminating fossil fuel-based energy sources, such as coal, oil, and natural gas, which currently account for a significant portion of the country's CO2 ...

Switzerland's energy independence rate is projected to reach 30% by 2025, up from 19% in 2005, placing it around the European average. Germany stands at 30%, while France lags at 17%.

Switzerland has the lowest carbon intensity among IEA countries, owing to a carbon free electricity sector dominated by nuclear and hydro generation. However, following the 2017 decision of the ...

Switzerland's degree of energy independence in 2018 was only 25%. In other words, we are 75% dependent on foreign countries for our primary energy supply. Energy independence refers to a ...

The latest analysis reveals that Switzerland's energy dependency has reached unprecedented levels, with 70% of its energy requirements being met through imports.

Switzerland's commitment to renewable energy is outlined in the 2050 Energy Strategy. As of 2020, renewable energy accounted for 27% of total energy consumption, marking a 10% increase since 1990. While surpassing the EU average of 19%, Switzerland lags behind leaders like Sweden (60%) and Finland (44%). Hydroelectric power dominates, representing over 60% of Swiss energy, while solar ...

Switzerland is currently dependent on energy imports during the winter months. The most important planned step towards increasing Switzerland's energy autonomy is to build new hydropower...

By embracing renewable energy sources, investing in innovative technologies, and prioritizing energy efficiency, Switzerland is well on its way to achieving energy independence and a ...

Switzerland energy independence

Switzerland's energy relies mainly on hydroelectric, nuclear, and natural gas, as well as imported petroleum for cars since Switzerland produces no fossil fuels.

According to current legislation no new nuclear power plants can be authorised in Switzerland. However, political discussions are going on with the aim to keep nuclear energy open as an option for the long ...
