The latest TCRA Communications Statistics Report (Q2 2025) offers a granular look at the very backbone of this transformation: the strategic distribution of our radio base stations.

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

The deployment of 5G networks in Tanzania will drive significant investments in telecommunications infrastructure, including the installation of new base stations, towers, and fiber ...

Since mmWave base stations (gNodeB) are typically capable of radiating up to 200-400 meters in urban locality. Therefore, high density of these stations is required for actual 5G deployment, that leads to ...

Maintenance issues and climate change-induced water shortages have caused a 400-megawatt electricity shortfall in Tanzania, triggering power rationing across the East African nation, ...

Many Tanzanians point the finger of blame at the recently-launched Standard Gauge Electric Railway, but officials say the frequent power cuts are due to another challenge.

Tanzania's operators have to contend with challenges like power outages (backup generators and batteries are used at towers), fiber cuts (from road works or vandalism), and even ...

Tanzania power cuts are becoming increasingly common, with blame apportioned to poor infrastructure maintenance, drought, flooding, and huge gaps in the country's electricity production.

Tanzania's electricity access remains low, at 38 percent, even though it is listed among the fastest growing economies in Africa. Lately, many parts across the country have been ...

Tanzania s 5G base stations cause power cuts

While Tanzania is making progress towards self-sufficiency in electricity generation, ongoing power outages remain a concern for citizens, many of whom claim they are not benefiting ...
