Solar is set to become the largest green energy source globally, the question now for Europe is whether it can revamp its grid fast enough to prevent another dramatic blackout.

Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. The cost of solar power decreased by 90% between 2010-2023, according to the International Renewable Energy ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Solar remained the EU's fastest growing power source in 2024, rising above coal for the first time. Wind power remained the EU's second largest power source, above gas and below ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power.

EU solar power output grew 21.7% (i.e., by 54 terawatt-hours, TWh) in 2024, expanding from 9.3% to 11.1% of total generation - a trend mostly driven by new capacity additions. Solar plants ...

For the first time, solar became the EU's largest single generation technology in June 2025, providing 22% of total power output. Together, wind and solar are set to deliver over 30% of ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind energy.

Europe's solar future is not just about installing more panels -- it's about managing solar intelligently: when it's produced, when it's needed, where it's stored, and how it's shared.

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth.

The current situation of solar power generation in Europe

SolarPower Europe's latest analysis highlights record installations, policy momentum, ...
