I usually go for solar but the wind turbines might be better as you aren't paying workers and can put them up on ledges you may not otherwise use. It may be more up front cost and need a lot of them.

If I recall correctly, the Offshore Wind Turbine is one of the most expensive power plants in the game on a per-megawatt basis, especially when neglecting hidden and indirect costs (fuel, ...

I honestly thought wind power would cost the most per mw, but if you have the elevation and can get 100% effectiveness then it may be a great investment. I think I'm going to start adding elevation to ...

I try to minimise power need until modern era then go straight from the coal power plant to solar. Set wages on power plants and the mines that supply them to maximum for better efficiency and if youre ...

The power plant turns the million-year-old remains of dinosaurs into fresh, modern electricity, providing electricity that the inhabitants of Tropico would waste by pouring too much water ...

Wind Turbines don't need any resource but only produce a small amount of electricity and last is the Solar Plant which also needs no resources, but requires the Modern Era and is the ...

Solar power doesn't require extra resources or cause pollution but it gives the worst deal per tile aside from a low wind turbine. It also doesn't require roads, but if you're looking for power ...

Solar power plants are buildings in Modern Times (Tropico 4) that take the place of wind turbines. By default, they generate 100 megawatts of power. This can be increased by buying more solar panels. ...

The Solar Power Plant is the ultimate in green electricity... provided you ignore the hydrochloric acid, sulfuric acid, nitric acid, hydrogen fluoride, trichloroethane, and acetone used to make photovoltaic cells.

Although the amount of electricity generated depends on how many job positions are filled, it doesn't matter

Tropico 6 Solar Power Plant

whether workers are physically present at power plant.
