-----

This study aims to present the state-of-the-art of parabolic trough solar collector technology with a focus on different thermal performance analysis methods and components used in ...

A parabolic trough is made of a number of solar collector modules (SCM) fixed together to move as one solar collector assembly (SCA). A SCM could have a length up to 15 metres (49 ft 3 in) or more.

In addition to the standard parabolic trough plant, it is possible to build a hybrid solar-fossil fuel power plant using trough technology. Such plants are based on a natural gas-fired combined cycle power ...

KROHNE provides a complete portfolio of measurement solutions for concentrated solar power generation and can refer on field proven products and solutions with numerous references including ...

All together, nine trough power plants, also called Solar Energy Generating Systems (SEGS), were built in the 1980s in the Mojave Desert near Barstow, California.

Objective - to publish best practices and lessons learned from the engineering, procurement, construction, commissioning, operation and maintenance of existing parabolic trough and central ...

The BS IEC 62862-3-1:2022 is an essential standard for anyone involved in the design, implementation, and operation of parabolic-trough solar thermal power plants.

This document is applicable to the design of new, expanded or rebuilt parabolic-trough solar thermal power plants using a steam turbine.

In 1983, Southern California Edison (SCE) signed a an solar electric parabolic trough power plant. Co sequently, Acurex negotiated similar power purchase agreements with plants.
