Major oil companies, like Shell, are transferring Gas Stations to Charging Stations, supported by UK government incentives to stimulate the charging infrastructure.

At the end of January 2026, there were 88,513 electric vehicle charging points across the UK, across 45,242 charging locations, 116,729 EVSE* and 122,690 connectors. Last month, 717 net new charging devices ...

The UK recognises that a focus on vehicles is only half of the challenge. A world-class charging infrastructure is absolutely fundamental to delivering net zero road transport. This document...

Discover all statistics and data on Electric vehicle charging infrastructure in the United Kingdom now on statista !

Comprehensive analysis of the UK's rapid charging network in 2024, examining growth patterns, regional coverage, and technological advancements across Britain.

A major challenge is the uneven distribution of charging stations. Rural areas often lack sufficient infrastructure, leaving residents with limited access to public chargers.

By 2030, the UK's EV charging landscape will transform with 300,000 charge points, V2G technology, and seamless payments, ensuring reliable electric car charging for all. The UK's 2030 ban on ...

Coordinated delivery of chargepoints and energy grid capacity in key locations across the UK will aid the effective rollout of charging to ensure all customers have access.

We have reviewed this capacity at a street by street level using our local distribution substations. We assessed the available capacity at each site and have represented this as a generic level of EV charging capacity. Our ...

UK Energy Storage Charging Station Distribution

There is an uneven geographical distribution in total charging devices across the UK. This distribution is more evenly spread for charging devices rated 50kW and above, but some regional...
