-----  
Is solar energy a good option for crude oil heating?

A thermal storage system (TES) is included to handle the sun's intermittent nature. The system's energy and exergy efficiencies were determined to be 60.94 and 19.34%, respectively. In addition, a 10% solar contribution to crude oil heating reduces 11,950 tonnes of CO<sub>2</sub> annually.

Can solar energy be used in the oil industry?

In Absi Halabi et al., the application of solar energy in the oil industry is reviewed. As noted there, petroleum (oil) energy is the major contributor to energy inputs worldwide, with 34.25%, meaning 172 EJ (Exa Joules = 10<sup>18</sup> J).

Can solar hybrid system generate steam in oil refinery?

Conclusion The present study investigates the feasibility of solar hybrid system to generate steam in the oil refinery to maintain the temperature of heavy crude oil products before despatching from storage tanks. Due to the intermittent behaviour of solar energy, the solar hybrid system is integrated with a sensible heat storage tank.

Can solar energy drive crude oil refineries?

Employing solar energy to drive crude oil refineries is one of the investigated pathways for using renewable energy sources to support lowering the carbon emissions and environmental impact of operating the processing of fossil-based fuels.

The oil and gas industry is increasingly seeking operational improvements to reduce costs and emissions while improving resilience. This study describes techno-economic analysis of ...

Other major electricity generation technologies include gas turbines, hydro (water) turbines, wind turbines, and solar photovoltaics. The U.S. Energy Information Administration ...

Focusing on the five largest sources of renewable electricity generation--hydroelectric, wind, biomass, solar and geothermal--this paper provides information on historical trends in power ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

82% of U.S. energy comes from fossil fuels, 8.7% from nuclear, and 9.1% from renewable sources. In 2023, renewables surpassed coal in energy generation. 1 Wind and solar are the fastest ...

Sensible thermal energy storage (TES) system is integrated into the refinery's process heating to handle the intermittent nature of solar energy.

The integrated technologies are: concentrated solar tower, radiative heat tube, steam power cycle, hybrid solar and oil-fired steam generator, and alkaline electrolysis. The system is ...

The world's largest industrial heat battery has been unveiled at a California oil facility, showcasing the potential of solar power for heavy industry.

After several record-breaking years, the U.S. clean energy sector faces a critical moment. Solar deployment and electric vehicle (EV) sales broke records in 2023 and 2024. ...

The purpose of this study is to investigate the potential use of solar energy within an oil refinery to reduce its fossil fuel consumption and greenhouse gas emissions. A validated ASPEN ...
