Our solar glass products meet stringent international standards and certifications. We provide customized products in a range of sizes and thicknesses to meet our customers' needs. Higher ...

solar applications. E.g. the low-iron float glass Planibel Clearvision (thickness of ≥ 5 mm) is perfectly suitable for BIPV applications while Planibel Clearlite, clear float glass (2 to 4 mm thickness) is a ...

Solar glass can be either low-iron patterned glass or low-iron float glass. Both can be recycled if the quality is acceptable, but this depends on the glass composition and the end product to be produced.

(4) By Implementing Regulation (EU) No 471/2014 (9) ("the original anti-subsidy regulation"), the Commission imposed definitive countervailing duties on imports of solar glass ...

From a policy perspective, the EU protects locally produced ultra-white glass with an iron content above 300 ppm, primarily used in standard photovoltaic panels. Glass with an iron content ...

To achieve high solar energy conversion, the total iron content must be strictly controlled, usually below 100 ppm, and for premium ultra-clear glass, even below 80 ppm.

What type of glass - float, patterned or tubing glass - is needed for what application and what are the detailed specifications (transmission, iron content, thicknesses, bow, grinding, toughening, prices etc.)?

Producing highly transparent PV glass requires low-iron silica sand and various other materials such as limestone, soda ash, dolomite, and alumina.
