What is a Megapack energy storage system?

Megapacks are designed for large-scale energy storage. Megapacks are used by utilities to replace peaker power plants, which generate energy during periods of peak demand. Megapacks store grid energy rather than generating it from fuel.

How much energy can a Megapack store?

Think of it as a giant battery pack, capable of storing massive amounts of energy generated from renewable sources like solar and wind. Each Megapack can store over 3 MWh of energy enough to power hundreds of homes for hours. But the real magic happens when Megapacks are deployed in large numbers, forming grid scale energy storage projects.
